Q1. Plot \( y = x^2 + 4z^2 \)

Q2. Find equation of the plane that passes through points A(1, -2, 3), B(0, 1, 2) and C(1, -1, 1).

Q3. Find distance between two parallel planes given by \( 10x + 2y - 2z = 5 \) and \( 5x + y - z = 1 \)
