Title: Number Theory
Credit: 3-0-3
Textbook: An Introduction to the Theory of Numbers, by Niven, Zuckerman, and Montgomery, 5th edition, 1991, Wiley & Sons.
Objective: The aim of this course is to introduce students to the fundamental concepts and results of Number Theory. The first three parts deal with divisibility and primes, congruences, and quadratic reciprocity. Arithmetic functions and related notions are included in Part 4. Diophantine equations are covered in Part 5. The last part of the course is devoted to Irrational Numbers and to Public-Key cryptography.
Prerequisite: Math 232 or Senior standing.

Assessment:

- Exam 1: 22%
- Exam 2: 22%
- Final Exam: 34%
- Class assignments: 22%
